International filing date (day/month/year)

Priority date (day/month/year) 07.11.2002

05.11.2003

Applicant

GLAXO GROUP LIMITED et al.

- 1. The applicant is hereby notified that this International Preliminary Examining Authority transmits herewith the international preliminary examination report and its annexes, if any, established on the international application.
- 2. A copy of the report and its annexes, if any, is being transmitted to the International Bureau for communication to all the elected Offices.
- 3. Where required by any of the elected Offices, the International Bureau will prepare an English translation of the report (but not of any annexes) and will transmit such translation to those Offices.

#### 4. REMINDER

The applicant must enter the national phase before each elected Office by performing certain acts (filing translations and paying national fees) within 30 months from the priority date (or later in some Offices) (Article 39(1)) (see also the reminder sent by the International Bureau with Form PCT/IB/301).

Where a translation of the international application must be furnished to an elected Office, that translation must contain a translation of any annexes to the international preliminary examination report. It is the applicant's responsibility to prepare and furnish such translation directly to each elected Office concerned.

For further details on the applicable time limits and requirements of the elected Offices, see Volume II of the PCT Applicant's Guide.

The applicant's attention is drawn to Article 33(5), which provides that the criteria of novelty, inventive step and industrial applicability described in Article 33(2) to (4) merely serve the purposes of international preliminary examination and that "any Contracting State may apply additional or different criteria for the purposes of deciding whether, in that State, the claimed inventions is patentable or not" (see also Article 27(5)). Such additional criteria may relate, for example, to exemptions from patentability, requirements for enabling disclosure, clarity and support for the claims.

Form PCT/IPEA/409 (January 2004)

see separate sheet

#### Re Item III

Non-establishment of opinion with regard to novelty, inventive step and industrial applicability

Claims 34 and 35 do not meet the requirements of Article 6 PCT in that the matter for which protection is sought is not clearly defined. Said claims contain references to the description and the drawings. According to Rule 6.2(a) PCT, claims should not contain such references except where absolutely necessary, which is not the case here.

#### Re Item V

Reasoned statement under Rule 66.2(a)(ii) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

Reference is made to the following documents:

D1: EP-A-0 428 380 (RIKER LABORATORIES INC) 22 May 1991 (1991-05-22)

D2: EP-A-0 075 548 (DRACO AB) 30 March 1983 (1983-03-30)

D3: US-A-5 482 030 (KLEIN DAVID) 9 January 1996 (1996-01-09)

- 2. Claims 1-4, 7, 8, 13-24 and 30-33 do not contain any features which meet the requirements of the PCT (Article 33(2) PCT) in respect of novelty.
- 2.1 Independent claim 1 does not meet the requirements for novelty (Article 33(2) PCT), since it reads onto the disclosure of document D1, which is considered to represent the closest prior art for the present application (claims 1-21). Document D1 shows a drug delivery device for delivering to a patient a drug composition from a container which contains the drug composition (column 1, lines 1-12), the container adapted to be placed in a dispensing mode thereof on application of an actuating condition thereto, wherein the device comprises:
  - a dispensing unit adapted to receive the container fig.4 (13)), the dispensing unit having an actuating mechanism operable to apply the actuating condition to the container and an outlet through which the drug composition is dispensable from the device (column 1, lines 42-45); and
  - a removable casing unit for the dispensing unit (fig.4 (1)); and wherein:
  - the dispensing and casing units have securing features for releasably, fixedly securing the units together (column 4, lines 28-42); and
  - the dispensing unit is operable to apply the actuating condition to the container when fixedly secured to the casing unit (column 4, lines 15-27) and when

independent from the casing unit (column 2, lines 29-31).

- 2.2 All features of dependent claims 2-4, 7, 8 and 13-21 are also disclosed by document D1 see especially column 3, line 30 column 4, line 42.
- 2.3 Independent claim 22 does not meet the requirements for novelty (Article 33(2) PCT), since it reads onto the disclosure of document D2, which is considered to represent the closest prior art for the present application (claims 22-33). Document D2 shows a method of manufacturing a drug delivery device for delivery of a drug formulated in a drug container (page 1, paragraph 1) which is adapted to be placed in a dispensing mode on application of an actuating condition thereto, the method comprising the steps of:
   providing a dispensing unit (fig.1 (1)) for receiving the container (fig. 1 (3)) which has an actuating mechanism (fig.4 (5)) for applying the actuating condition thereto and an outlet (fig.4 (6)) through which the drug formulation is dispensed on application of the actuating condition to the container; and separately providing a casing unit (fig.1 (9)) adapted to fixedly hold the
- 2.4 All features of dependent claims 23-24 and 30-33 are also disclosed by document
   D2 see especially page 5, paragraph 2 page 6, paragraph 1.

dispensing unit (fig.1 (1)) that the drug is dispensable from the container by the

3. Claims 5-6, 9-12 and 25-29 of the present application do not meet the requirements for inventive step (Article 33(3) PCT).

dispensing unit when held by the casing unit.

- 3.1 The dispenser according to claims 5-6 differs from that known from document D1 only in that the features of cocking and breath activation have been omitted. Apart from the obviously and consequently simpler design of the device, the only result of the omission of said features is that the effect related to breath activation is no longer present in the dispenser according to claims 5 and 6. Such a simplification does not involve an inventive step (Article 33(3) PCT).
- 3.2 The subject-matter of claims 9-12 differs from the most relevant state of the art (document D1, see V.2.1) in that the container is fitted with a dose counter (claims 9-12). Same applies to the features of claims 25-29 in respect to document D2 (see V.2.3)

# INTERNATIONAL PRELIMINARY International application No. PCT/EP 03/12436 EXAMINATION REPORT - SEPARATE SHEET

Problem to be solved by the differentiating feature may therefore be regarded as how to improve a patient compliance with prescribed medication dosing.

However, this feature has already been employed for the same purpose in a similar inhaler, see document D3, column 13, line 47 - column 14, line 47. It would be obvious to the person skilled in the art, namely when the same result is to be achieved, to apply this feature with corresponding effect to a device according to document D1 (for claims 9-12) or respectively D2 (for claims 25-29), thereby arriving at a dispenser according to claims 9-12 (or respectively 25-29). The subject-matter of claims 9-12 and 25-29 does therefore not involve an inventive step (Article 33(3) PCT).

4. Independent claims 1 and 22 should have been drafted in the two-part form, as normally required by Rule 6.3(b) PCT.
